

# UV-MAT

## UVC SHOE SANITIZER

No more handling of hazardous chemicals is required to clean PPE

UVC BASED COVID-19 SANITIZER

## CORONA KILLER

The health-care workers on the front lines of the fight against COVID-19 are pleading for more masks and protective gear to save them from the virus. Companies are cranking up production but there's still not enough to go around yet. Fortunately, LOKOZO come up with new ways to let doctors and nurses safely reuse the gear they have with new disinfection procedures.

# UV-MAT

## UVC SHOE SANITIZER

UV-MAT is an effective use of UV technology that reduces the organisms that cause HAIs (Healthcare Associated Infections). UV-MAT lowers the risk of cross contamination and does not add labor costs.

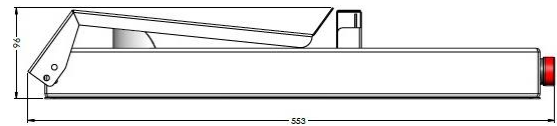

Infection control and prevention programs have been started with systems that cannot provide an effective line of defense against HAI's. UV-MAT shoe sanitizer is the first hands and chemical free infection control product that works 24/7 and kills up to 99% of exposed organisms on the soles of shoes in just 5 to 8 seconds. UV germicidal light kills organism at DNA level, by inactivating the DNA in microorganisms.

### FEATURES

- IR SENSOR used for each shoe
- UV-MAT is shatter resistant
- Power Rating: 40W
- Self Cleaning
- Kills up to 99% of UVC exposed germs and pathogens
- Disinfects without gels or chemicals
- In-built Timer 10 second disinfection time to deliver 275nm UVC Dose: 100 mJ/cm<sup>2</sup> in 10sec
- Hands free
- Automatic ON / OFF within 10 SEC
- 304 stainless steel construction
- Countdown disinfection timer with compliance usage counter
- UL listed components
- LED life 50000 Hr
- Weight: 11 Kg
- Warranty: 2Years
