BDP SERIES

BDP series is a very popular self-parking system. It is driven by hydraulic or motor system and ran by PLC. BDP series have 2 different models with all different floors for options; we can build from 3 floor under ground to 15 floor above ground. The equipment is available for both sedans and SUVs, the capacity is from 2000kg to 2500kg.

The biggest advantage of our BDP system is that we are now still keeping a national record of the lifting and retrieving speed.

There are different finishing (paint spray) and water proof treatment (zinc spray) available at the customer request.

Advantages

- The equipment can be used for both sedan & SUV
- Finished with zinc spray on main structure and galvanized/plated for small parts for rust-proof
- PLC control with digital & real time monitor display
- New hydraulic frequency conversion technology ensure safety and speed
